

How do you determine if a set of data represents an exponential function?

For example:

x	f(x)
-1	0.667
0	1
1	1.5
2	2.25
3	3.375

$$f(x) = 1.5^x$$

In this lesson you will learn how to write and graph an exponential function by examining a table that displays an exponential relationship.

Let's Review

1st Difference

	x	y	
1	0	6	-2
1	1	4	-2
1	2	2	-2
1	3	0	-2

1st difference is a constant of -2.

Let's Review

Exponential Functions

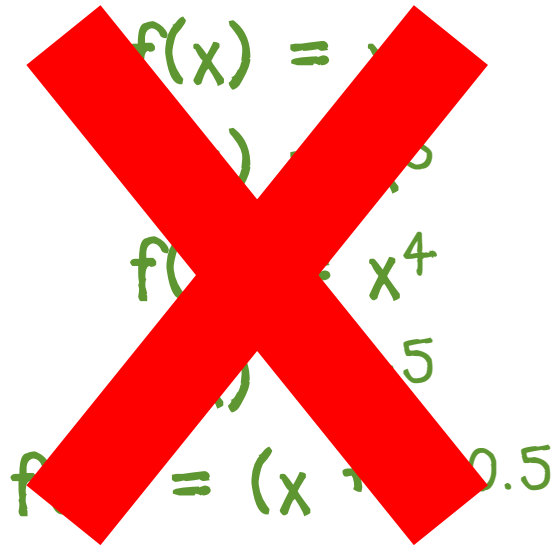

$$f(x) = ab^x$$

a = initial amount/start value ($a > 0$)

b = common ratio ($b > 0, b \neq 1$)

A Common Misunderstanding

Exponential Functions

$f(x) = x$
 $f(x) = x^2$
 $f(x) = x^3$
 $f(x) = x^4$
 $f(x) = x^5$
 $f(x) = (x + 0.5)$

$f(x) = 2^x$
 $f(x) = 3^x$
 $f(x) = 4^x$
 $f(x) = 5^x$
 $f(x) = 0.5^{x+1}$

Core Lesson

Identifying an Exponential Relationship From a Table

	x	f(x)
1	-1	$\frac{2}{3}$
1	0	2
1	1	6
1	2	18
	3	54

1st Difference

2nd Difference

Common Ratio between y-values is 3.

Core Lesson

Writing an Exponential Equation

x	f(x)
-1	$\frac{2}{3}$
0	2
1	6
2	18
3	54

$$f(x) = ab^x$$

$$a = 2$$

$$b = 3$$

$$f(x) = 2(3)^x$$

Core Lesson

Graphing Exponential Functions

$$f(x) = 2(3)^x$$

x	f(x)
-1	$\frac{2}{3}$
0	2
1	6
2	18
3	54

Asymptote at $y = 0$

In this lesson you have learned how to write and graph an exponential function by examining a table that displays an exponential relationship.
